01 April 2010.**

Heliophysics Summer School

28 July to 4 August 2010
Boulder, CO

Applications are invited for the 2010 Heliophysics Summer School, to be held in Boulder, Colorado. *NASA Living With a Star* sponsors the program, and it is hosted by the University Corporation for Atmospheric Research (UCAR), Visiting Scientist Programs.

The Summer School has two principal aims:

1. To deepen the appreciation of the basic science of heliophysics for a select group of students as teachers take them through highly-interactive seminars and hands-on working groups; and
2. To expand the newly-published textbook series to include labs, problem sets, and more background material, from which heliophysics may be taught at universities worldwide.

The 2010 program will focus on teaching graduate level students and first or second year postdoctoral fellows the fundamentals of heliophysics along with the cause and effects of space storms. The first two textbook volumes will be used as teaching tools:

- *Heliophysics I Plasma Physics of the Local Cosmos*
- *Heliophysics II: Space Storms and Radiation: Causes and Effects*

Deadline: 1 April 2010
