Circulated in Volume 2, Number 90.  
14 November 2010.

**3. DVD arrival at your postal address:** Within two week after payment obtained.

The image shows the cover and information page for the 'Space Weather DVD 2010'. The cover features a vibrant sunset or sunrise over a landscape with a rainbow, and the title 'SPACE WEATHER' in large white letters. A circular logo in the top right corner of the cover indicates it is the 'Updated 2010 edition'. The information page on the left provides details about the DVD's content, system requirements, languages, and sponsors.

**Space Weather DVD 2010**

This DVD will take you on a journey through the network of relationships between the Sun, cosmic rays from stars and the complex effects on the Earth, technology, life and humans. We will travel through the Milky Way, from the Sun, via heliosphere to Earth and follow the processes that cause space weather effects such as the beautiful aurora. We will also learn about the hidden sides of space weather: how it has caused satellite failures, interrupted mobile phone communications and TV signals, cause radiation risks for airline crew and passengers respectively, power outages in the U.S. A and Europe and even contribute to global warming.
