## PRELIMINARY INFORMATION

The organization of “UN/Ecuador Workshop on International Space Weather Initiative (ISWI)” is advancing successfully. The Quito Astronomical Observatory is immersed in these activities and has proposed October 2012 as a tentative time for the realization of this important scientific meeting which will congregate researchers from around the world working in the Space Sciences. Initially, we are planning to realize the workshop in this manner: One part in the capital city Quito and one part on the San Cruz Island of the Galapagos Archipelago. We will keep the scientific community informed on further advances in workshop organization.

Yours sincerely,

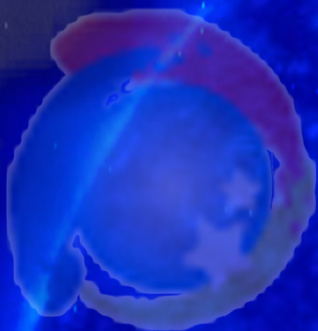

Ericson Lopez  
Organizer, UN/Ecuador Workshop on ISWI.
